Practical solutions for busy working days

Plum is a brand of hygiene products for the professional market. With more than 50 years' experience in the field of hygiene we have developed a product range that makes it easy to maintain proper hygiene within different kinds of workplaces. This applies to hand hygiene as well as the cleaning and disinfecting of surfaces.

All our products and solutions have been developed based on a thorough knowledge of the industries we serve. We therefore have a wide range of soaps, skin care creams, cleaning and disinfection products that meet the requirements and needs of the industrial, food and healthcare sectors.

Environmentally friendly products

At Kiilto, we place great emphasis on ensuring that our products and packaging are a good choice for both the customer and the environment. We hold ISO 14001 environmental certification and we work continuously to reduce the environmental impact of our raw materials, packaging, production and transport.

We provide hygienic dispensers and packaging that provide the correct chemical dosage, can be emptied completely, and generate a minimum amount of waste. Our solutions are easy to use during busy working days and you can always find an option that is appropriate for your particular workplace.

Products bearing the Nordic Ecolabel represent a large and increasing proportion of the Plum range.

The Nordic Ecolabel makes it easy to identify the most environmentally friendly products. When choosing products bearing the Nordic Ecolabel, you are protecting nature and the environment, taking care of yourself and your loved ones, using less of the Earth's resources and showing consideration for the future of our planet. Better for the environment. Better for you.

Quality and certification

Plum products must always be safe to use. Our quality system is based on ISO 22716 and ISO 9001, which is your guarantee that all our products are delivered with the same high quality every time. Our personal care products are dermatologically tested and proven to be mild.

You are always welcome to request a safety data sheet if you want more detailed information about our products.

Good hand hygiene

It is important that you take good care of your hands – they work hard your whole life. But while your hands are your most important tool, they are also the biggest source of infection. Inadequate hand hygiene can have serious

consequences, both for you and for others. Illnesses resulting from the spread of germs are still the most common cause of work-related sick leave. Clean and healthy hands are the best prevention.

Handwashing	Hand disinfection	Skin care
Wash your hands thoroughly with water and mild soap or hand cleansers to ensure they are completely clean. You should wash your hands when they are dirty, after visiting the toilet, before cooking or handling food, and before eating.	Use hand disinfection products on dry and not visibly dirty hands. Soap and hand disinfection combined is a very effective way of avoiding the spread of bacteria and viruses. You can use our hand disinfectants when you do not have access to soap and water.	Regularly apply a good and restorative skin care cream, preferably both before, during and after work. Healthy and supple skin prevents skin problems and eases the cleaning of the skin after work.

Use the product guide below to find the best solution for your work situation.

A systematic approach to healthy skin

	Skin exposure	Handwashing	Hand disinfectants	Skin care
Industry	Heavy mechanical and industrial grime from e.g. diesel oil, soot-oil mixtures, hydraulic oil, metal dust and brake dust	Profi Plulux		Plutect Dual Handy Plus

	Patient care work at home, in nursing homes and clinics	Mild Daily	Hand dis. 85% gel	Handy Mild Handy Cream 40%
	Hair and body wash	Nature Shampoo		Handy Mild

Hand cleansers

We have developed a range of hand cleansers that effectively remove all kinds of grime. The products contain corn cob granules, which act as a natural and biodegradable abrasive.

All our hand cleaning products also contain glycerine, which replenishes moisture and prevents skin from drying out. Keep in mind that these products should be used on wet hands.

	SUPER PLUM		MEDIUM	Hand cleaning paste made from vegetable oils, without perfume, colouring or solvents. Effectively removes light oily grime, water-based inks and other dirt from hands.	PACKAGING 250 ml tube 1.4 l bag-in-box 1 l can 3 l can Pump for 3.0 l can	ARTICLE NO. 1015 1018 1042 1043 4117

Hand soaps

To keep skin healthy, it must be kept clean – every day. Skin cleaning and frequent handwashing can damage the skin, so it is important to choose a mild and skin-friendly soap. All our soaps have a pH value close to the skin's natural levels and contain ingredients with a regenerating effect that minimise skin drying.

We provide soap with and without perfume, soap for regular and frequent handwashing, and soap that is especially designed for the whole body. The one thing they all have in common is that they are extremely mild and effective.

MILD

Extra mild and very skin-friendly unscented soap. Specially developed for frequent handwashing and can be used often without drying out the skin. Also suitable for intimate washing.

Hand disinfectants

Hands are the biggest source of infection spread and there is a clear correlation between lack of hand hygiene and increased risk of infection. Good and proper hand hygiene significantly reduces this risk.

Plum hand disinfection products are alcohol-based and contain 85% ethanol. They are denatured with IPA and contain glycerine, which prevents the skin from drying out. Hand disinfectants should be applied on clean and dry hands, and the hands should be wet for 30 seconds for optimum effect. For surgical hand disinfection, keep your hands wet for 2 minutes.

All Plum hand disinfection products comply with the National Infection Hygiene Guidelines (NIR), are approved under applicable legislation and are assessed as suitable by the Central Unit for Infection Hygiene (CEI).

HAND DISINFECTOR 85% GEL

Alcohol-based hand disinfectant in gel form. Contains 85% denatured ethanol. Effectively reduces bacteria and viruses on the hands and minimises the spread of infection. Documented efficacy: EN1500:2013 EN14476:2013+A1:2015

Biocides must be used responsibly. Always read the label and product information before use.

Skin care creams

Healthy and supple skin lasts longer. By using a skin care lotion, you support your skin's natural barrier function, which protects it from infection and drying out. Water and soap dissolve this barrier and tend to leave the skin dry. Therefore, if you wash your hands frequently or work in cold or wet environments, you should lubricate your hands with

a regenerating skin care cream several times a day and preferably after each wash. Plum skin care creams are mild and nurturing. There is a variety for every skin type and every job at hand. Skin care cream should always be applied to clean and dry skin.

PLUTECT DUAL

Skin care cream with protective effect and without perfume. For use before and during work with both water-based and oil-based substances.

PACKAGING	ARTICLE NO.
100 ml tube	2541

200 ml tube (SPF 30)	3022

Cleaning and disinfecting surfaces

Good hygiene and the regular cleaning and disinfecting of surfaces prevent and reduce the spread of infection. Every surface is different and do not withstand the same kinds of disinfectants. That is why we offer different types of surface disinfectants in our product range, in the form of wet wipes and liquid disinfectants.

NIR and CEI recommend that cleaning and disinfection are performed as two separate procedures. When disinfecting, the surface must be kept moist for as long as the contact time indicated on the product. To protect your hands, we recommend using gloves according to EN 374.

WipeClean

WipeClean is a complete range of disposable cloths for cleaning and disinfecting surfaces and non-invasive medical devices. The pre-moistened disposable cloths contain the exact amount of liquid and chemical dosage to achieve the greatest effect. This means they are ready for use straight from the pack. The cloths are sealed in airtight packs with a

convenient, resealable function that ensures that they do not dry out. Simply take a wipe from the pack, wipe, and dispose. Easy! All WipeClean disinfection products have been tested and had their effectiveness confirmed according to a number of EN standards, including EN 16615. The WipeClean packs can be placed in the corresponding wall dispensers.

UNIVERSAL CLEANING

Wipes for easy and convenient cleaning of all water-resistant surfaces. Each wipe contains the correct mixture of water and soap and are ready for use straight from the pack. The soft and comfortable wipes fit to the shape of your hand to easily access all corners.

Dispensers

Good hygiene requires more than just good products. The products also need to be easy to use, easily accessible and located in the right places. This can be ensured with our flexible dispenser solutions. Dispensers make it easy to establish good habits and ensure a high standard of hygiene in your working life.

Our dispensers are all hygienic and easy to refill and clean. NIR recommends using wall-mounted, touch-free or elbow-operated dispensers.

MP2000

Reliable and hygienic dispensing system with grey transparent cover. The system consists of two different modules. It offers an ideal solution for industry, as it can combine several products in the same dispenser. Can be used for hand cleansers, soap, cream and hand disinfectants.
